

PROJECT RECAP

NASA/ LYNDON B JOHNSON SPACE CENTER

ROOF REPLACEMENT AND LOGGIA LEDGE REPLACEMENT -HOUSTON, TX

GENERAL PROJECT SCOPE

- Six buildings with multiple roof levels
- Remove existing roof
- Install new insulation and modified bitumen roof system and stainless steel
- Install new lightning protection system and new fall protection system
- Replace all gravity ventilators

LOGISTICAL CHALLENGES

The NASA project required work on multiple occupied buildings, simultaneously, in a highly secured environment. During the project the occupied buildings were not to be disturbed so that normal work activity/function may continue. This project has incurred additional cost increases due to change orders for conditions not known by the customer until various stages of work had begun.
